

Proposed change to Adult Championship Points Program computation method

Submitted by Niina Baum

I am proposing there be less of an impact on points if a race needs to be cut down to a one-day race. This would make it easier for an RGO or race official to make the right call in shortening a race to one day in the instance of high temps, slick/icy conditions, or other instances that may impact dog welfare and musher safety. As a musher who travels extensively to races for ISDRA points it is extremely discouraging when points are cut so drastically due to a race being shortened to one day, but as an RGO and event organizer I want to ensure the welfare and safety of the dogs and mushers is put first. This can be a difficult position to be in. This computation method change would better position us to put the welfare of the dogs and safety of the mushers first, while still allowing for a competitive race. This season alone we have experienced many races being shortened to one day due to temperatures being too hot and conditions being too slippery.

Current method:

e. In the limited classes, the sum of c. and d. shall be multiplied by the day factor; .5 for a 1-day race, 1.0 for a 2-day race and 1.5 for a 3-day race.

Proposed method:

e. In the limited classes the sum of c. and d. Shall be multiplied by the day factor; .9 for a 1-day race, 1.0 for a 2-day race and 1.1 for a 3-day race.
